

Åben chrome og tryk på de tre prikker øverst til venstre (disse kan være angivet med et andet symbol)

Vælg værktøjer -> Udviklerværktøjer

demann.dk

Tryk herefter de tre prikker lidt længere nede og vælg More tools -> Sensors

Vælg geolocation - > Custom location

The screenshot shows the developer tools interface with the following elements:

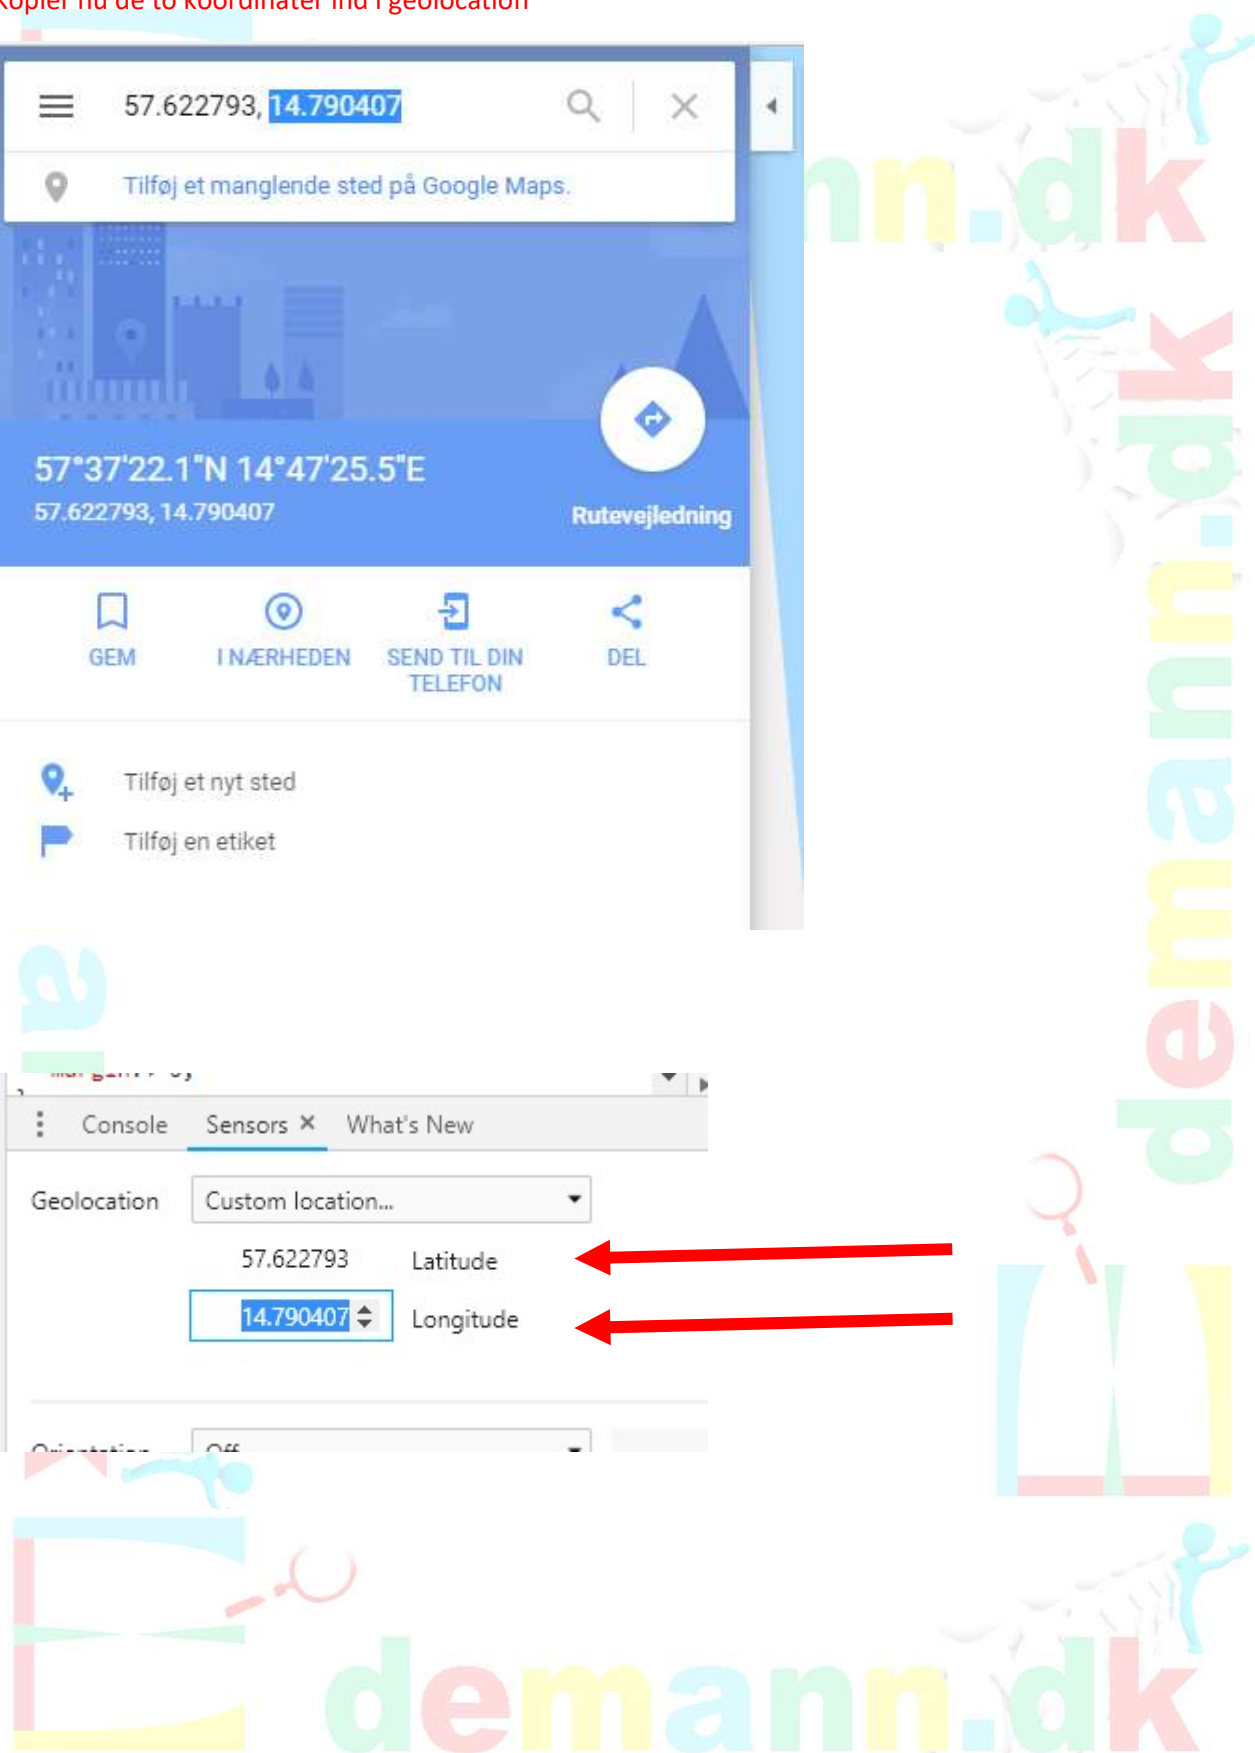

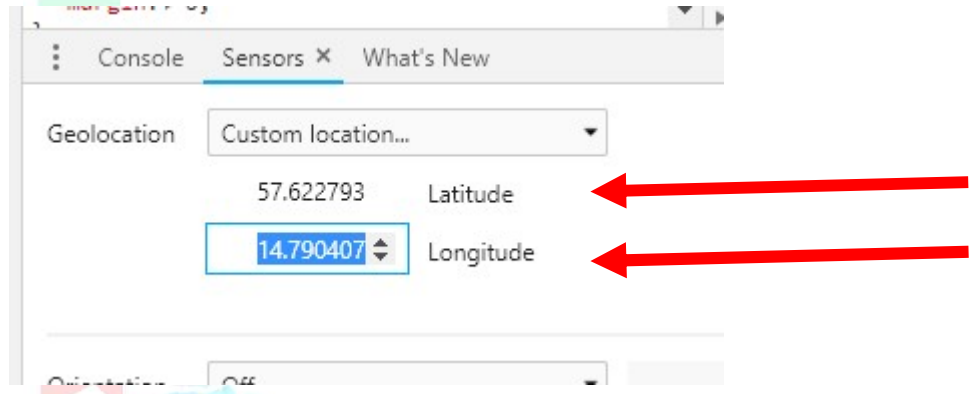

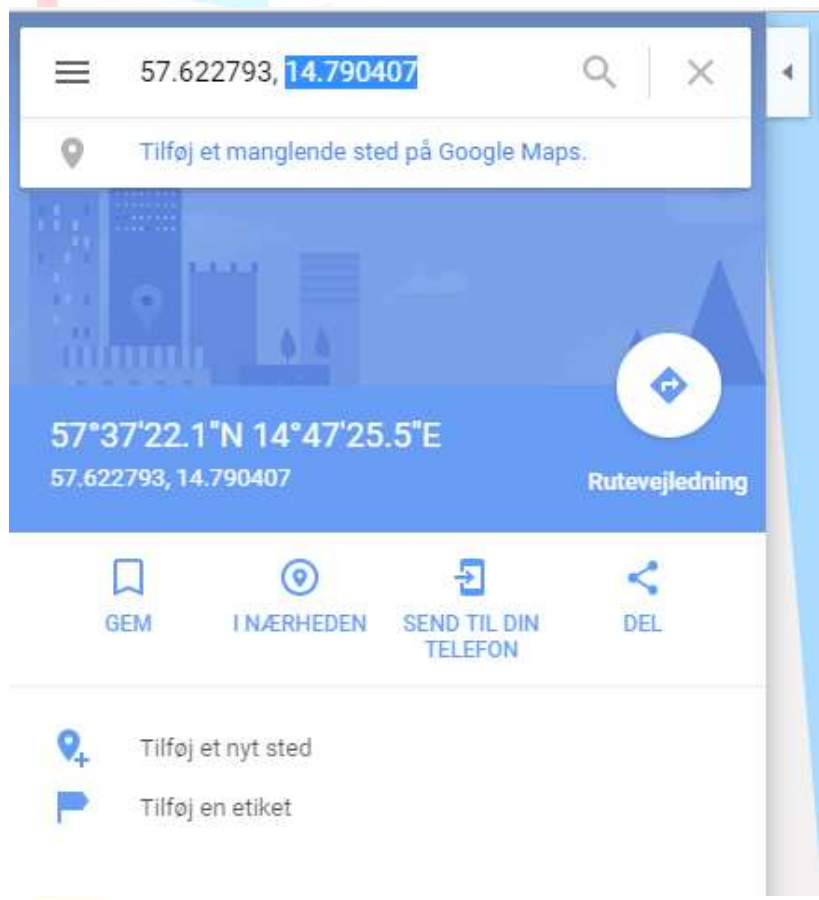

- Styles Panel:** Shows CSS rules for the body element, including `color: #222;` and `background-color: #fff;`. A dropdown menu is open over the `body { color: #222; }` rule, listing various location presets like Berlin, London, Moscow, etc., and an "Error" section with "Location unavailable". The "Custom location..." option is highlighted in blue.
- Geolocation Panel:** Located at the bottom, it shows a dropdown menu currently set to "Custom location...". Below it, the coordinates are displayed: Latitude: 57.622793 and Longitude: 14.790407.
- Background:** A map view is partially visible in the background, showing a location in Denmark.

Åbn maps i en ny fane eller vindue og vælg et sted det land, som du vil sætte dig til at være i. Der skal komme en boks frem i bunden, hvis ikke, så klik et andet sted på kortet.

Kopier nu de to koordinater ind i geolocation

Gå tilbage til første fane og vælg brug præcis placering i bunden (hvis Google spørger, så sig ja til, at den må bruge lokationer). Du vil nu kunne se, at din lokation er sat til det sted, hvor du valgte
